

Patterns of aircraft arriving to Heathrow on Easterly operations on an average summer day in 2008

average daily arrivals 87
percentage of all arrivals 14%
daily range 0 - 629
days with no arrivals 74%
days with <10 arrivals 75%

average daily arrivals 1
percentage of all arrivals <1%
daily range 0 - 14
days with no arrivals 79%
days with <10 arrivals 98%

— Radar track data below 3000ft amsl
 — Radar track data 3000 - 6000ft amsl
 — Radar track data above 6000ft amsl

Radar data shown is a sample shaded by height above mean sea level (amsl). Airport operations figures relate to fixed-wing aircraft movements in the 16 hour (0700 - 2300 BST) average summer day for the 92-day summer period 16th June to 15th September. Figures have been rounded to the nearest whole number. © Crown Copyright 2009. All rights reserved. Licence 100016105
